

## Consulting Engineering Fundamentals Workshop

ACEC/MN once again held a workshop series titled "Consulting Engineering Fundamentals," designed to give younger and/or newer engineers some insight into the business side of consulting engineering. Led by seasoned consulting engineering professionals, the series looks beyond nuts and bolts engineering to subjects not often taught in engineering school to give these younger/newer engineers an introductory education into a variety of areas.

On Thursday February 17th, 2011, Mark Leutgeb along with Craig Bursch of MBJ presented the Workshop: The Big Picture & Working with Clients. Topics included the role of a consulting engineer in society, professional registration, advancement to management/ leadership positions, marketing, client management, communication, and how we work with architects and other clients.

On Thursday, March 3rd, 2011, Dave Blume led the Workshop: Construction Delivery Methods which included discussion on available methods of delivery, roles and responsibilities of others, and project team.
