

F I R M O V E R V I E W

Founded in St. Paul, Minnesota, in 1935, Gausman & Moore is proud, and grateful, as we celebrate our 75th anniversary in 2010.

From the beginning, Gausman & Moore's founders developed three pillars on which to base the company's future growth: exceptional client service, intelligent engineering, and the right expertise. The hard work and long hours in the early years paid off as the business grew and projects grew progressively larger. Today, the company operates as a full-service mechanical and electrical consulting engineering firm providing design services to institutions, corporations, and governments throughout the United States. Specialized services include sustainable design, commissioning, fire protection and smoke control, energy audits, forensic studies, indoor air quality audits, arc flash studies, and mission critical power systems.

Gausman & Moore has distinguished itself in the industry by our unmatched responsiveness during the delivery of service to our clients. We truly believe in serving our customers, and in having a strong collaborative relationship with owners, architects, contractors, and subcontractors.

Our people – honest, hardworking, professional, energetic – characterize Gausman & Moore. We have Professional Engineers licensed in all 50 states and the District of Columbia. Our 85+ person staff includes 25 licensed Professional Engineers and 15 graduate engineers, supported by 50 technical staff. Our team also includes 26 LEED® Accredited Professionals. Through their dedication and integrity, our group continues to perpetuate the principles of our founders and is committed to meeting customer expectations on time, every time.

It is our philosophy to be responsive to our clients and sensitive to the architecture, using appropriate technology to design efficient, cost-effective systems that are safe, easily maintained, and sensitive to the environment.
